Website Audit: Unorthodox Suppression

www.unorthodox-suppression.com

Prepared March 28, 2026

Executive Summary

Unorthodox Suppression (a brand of Griffin Arms LLC, Stoneboro, PA) has a visually striking homepage with strong branding around the hexagonal titanium suppressor concept. However, the site has **critical SEO deficiencies, an incomplete e-commerce presence, brand fragmentation across platforms, and zero online review footprint**. These issues are costing you discoverability, trust, and sales.

CRITICAL: Platform Risk — Squarespace Prohibits Firearms

The site is built on **Squarespace v7.1**. Squarespace's Acceptable Use Policy explicitly prohibits "offering or selling any Commercial Products that are manufactured as, or primarily intended to be used as, **weapons, including firearms, restricted devices or ammunition**." Suppressors are legally classified as "firearms" under the National Firearms Act.

While Unorthodox Suppression does not process payments through Squarespace (purchases redirect to GearFire), the site still advertises suppressors with prices and "ORDER NOW" buttons — which likely violates the policy. Squarespace has enforced this ban since 2013 and reserves the right to **shut down the site without warning** at their sole discretion.

Recommendation: Migrate off Squarespace to a firearms-friendly platform as soon as possible. A site backup (design assets, images, content, color palette) has been prepared. The strongest migration paths are:

- **WooCommerce** (self-hosted WordPress) — total control, no platform risk, lowest cost (~$50–$125/mo for hosting + plugins)
- **BigCommerce** — explicitly firearms-friendly, FFL integration APIs ($299+/mo)
- **AmmoReady** — purpose-built for FFLs with distributor sync ($179–$999/mo)

Migrating also solves the GearFire checkout friction — you can own the entire purchase experience under the Unorthodox Suppression brand on a single domain.

1. SEO — Critical Issues

Not Indexed by Google

A `site:unorthodox-suppression.com` search returns **zero results**. This means Google has either not crawled the site or something is blocking indexation. This is the single biggest problem.

Action items:

- Verify the site is not set to "Private" or "Password Protected" in Squarespace settings (the age gate JavaScript may be blocking crawlers)
- Submit a sitemap to Google Search Console (`/sitemap.xml`)
- Register the site in Google Search Console and Bing Webmaster Tools immediately
- Check `robots.txt` — confirm it's not disallowing all crawlers
- The JavaScript-based age verification modal may be preventing search engines from reading any page content. Consider server-side age gating or a simple landing page that crawlers can parse

Missing On-Page SEO

- **No meta descriptions** visible on any page — Google will auto-generate (poorly)
- **No structured data** (Product schema, LocalBusiness schema, Organization schema)
- **No blog/content** — zero organic keyword targeting
- **Thin product pages** — the Shop page has placeholder products with "$25" prices and generic "Product Name" titles. This is damaging
- **Typo in hero headline**: "THE FIRST SUPPRESSOR OF **IT'S** KIND" — should be "ITS" (no apostrophe). This is front and center on the homepage

Keyword Gaps

You are not targeting any of the terms buyers actually search:

- "titanium suppressor"
- "3D printed suppressor"
- "hexagonal suppressor"
- ".22 suppressor" (for SPLIT)
- "best suppressor 2026"
- "NFA suppressor buy"
- "suppressor under $600" (SPLIT's price point)

> ***Note:*** *SIG Sauer launched a product called* ***HEXIUM*** *— a 3D-printed titanium suppressor with hexagonal internal geometry. While not externally hexagonal like yours, the name alone will compete for "hexagonal suppressor" keyword searches. You need to own that keyword space before SIG dominates it by name recognition alone.*

2. Brand & Trust Issues

Brand Fragmentation

You have **three separate brand identities** that confuse customers:

1. **Unorthodox Suppression** — the product brand / website
2. **Griffin Arms LLC** — the FFL / legal entity / GearFire store / Facebook / email
3. **@GriffinArms** on YouTube

A customer who finds "Unorthodox Suppression" and then gets directed to "Griffin Arms" on GearFire for checkout may question legitimacy. The email is `griffinarms@protonmail.com` — Protonmail is great for privacy but reads as informal/untrustworthy for a business selling $1,200 NFA items.

Action items:

- Get a branded email: `info@unorthodox-suppression.com` or `orders@unorthodox-suppression.com`
- Add "A Griffin Arms LLC Brand" tagline to the site to bridge the gap
- Unify social handles — `@unorthodoxsuppression` everywhere (note: the Instagram handle appears to be misspelled as `@unorthodoxsupression` — one 'p')

Minimal Review Presence

A handful of YouTube videos exist but are **not discoverable through web search** — none appear in Google results for any relevant suppressor search terms. This means they're functionally invisible to buyers researching their purchase.

Video	Channel	Type	Link
UNORTHODOX SUPPRESSION TUTORIAL | HEXAGON SUPPRESSORS | SMOKEY + SPOOKY	Griffin Arms (own channel)	Tutorial	Watch
NEW HEXAGON SUPPRESSOR TEASER BY GRIFFIN ARMS AND UNORTHODOX SUPPRESSION	Griffin Arms (own channel)	Teaser	Watch
Griffin Arms MFG Smokey	Suppressed Nation	Short	Watch
Unorthodox Suppression Smokey	Suppressed Nation	Full review	Watch
The Griffin arms Smokey hexagon suppressor in 5.56	SOSR Media	Range footage	Watch

Issues: Only 5 total videos, 2 of which are self-produced. None rank in Google search results. No in-depth reviews with metered dB data. No PEW Science tests, no major firearms YouTuber coverage, no blog mentions, no Reddit threads. For suppressors costing $550–$1,199, buyers do extensive research — and standard web searches return *nothing* about these products.

Quick wins: These existing videos should be embedded on the product pages of the Unorthodox Suppression website and linked in product descriptions on GearFire. The Suppressed Nation short and SOSR Media video are third-party social proof — use them.

Griffin Armament Name Confusion

Griffin Armament (a separate, well-established suppressor company founded by combat veterans) has significant brand presence, PEW Science reviews, and just released their own 3D-printed titanium suppressor (Optimus 6). The name overlap between "Griffin Arms" and "Griffin Armament" is causing search confusion — searches for your products return their results instead. This is another strong reason to **lead with the Unorthodox Suppression brand name** in all marketing, SEO, and social media rather than Griffin Arms.

Action items:

- Send units to reviewers: PEW Science, TFB TV, Garand Thumb, Administrative Results, Honest Outlaw
- Submit products for testing at PEW Science (the gold standard for suppressor sound data)
- Get listed on Silencer Shop or Silencer Central for broader distribution and built-in reviews
- Encourage customers to leave reviews on GearFire/Google

BBB Profile

Griffin Arms LLC has a BBB profile — make sure it's complete with hours, photos, and the Unorthodox Suppression brand.

---

3. Website UX/Design Issues

What's Working

- Strong visual identity — the hexagonal motif is distinctive and memorable
- Clean, dark aesthetic fits the tactical market
- Age gate is legally appropriate for NFA items
- Announcement bar for the new SPLIT product is good

What Needs Work

Issue	Impact	Fix
Shop page has **placeholder products** ($25 “Product Name”)	Destroys credibility	Remove placeholders or build out real product pages
Products redirect to GearFire for purchase	Friction, brand confusion	At minimum, add clear messaging about why; better: embed purchasing
SMOKEY & SPOOKY say “reservation for January 1, 2026 processing”	That date has passed — looks abandoned	Update to current availability status
Homepage product listings don’t describe **caliber** for SPLIT, SMOKEY, or SPOOKY	Buyers can’t tell what they’re buying without clicking through	Add caliber/category (e.g. “.22 LR”, “.30 Cal”) under each product name
No product specifications anywhere	Buyers need dB reduction, weight, length, caliber, thread pitch	Add spec sheets to each product
No hours of operation on Contact page	Customers won’t know when to call	Add business hours
No embedded map on Contact page	Missing easy UX win	Embed Google Maps
No warranty or guarantee information	Trust barrier for $1,200 purchase	Add warranty policy page
Contact email on the site is **not clickable** (no `mailto:` link)	Friction for mobile users especially	Wrap the email address in a clickable `mailto:` link
No FAQ page about NFA process	Huge missed opportunity	Create “How to Buy a Suppressor” content

Mobile

The Squarespace template handles responsive layout adequately, but verify the age gate modal and product sections on actual mobile devices.

---

4. Competitor Comparison

Pricing Position

Brand	Product	Price	Material	Method
Unorthodox (SPLIT)	.22 Suppressor	**$550**	Titanium	3D Printed
Unorthodox (SMOKEY/SPOOKY)	Hex Suppressor	**$1,199**	Titanium	3D Printed
SIG Sauer HEXIUM	3D Printed Suppressor	~$900–1,100	Titanium	3D Printed
Precision Armament TiTrex	.30 Cal	~$1,100	Titanium	3D Printed
Faxon Ion	Multi-Cal	~$800–1,000	Titanium	3D Printed
Dead Air Sandman-S	.30 Cal	~$800	Stellite/SS	Traditional
SilencerCo Omega 300	Multi-Cal	~$1,050	Titanium/SS	Traditional

Key takeaway: SPLIT at $550 is competitively priced for the .22 market. SMOKEY/SPOOKY at $1,199 are at the **top of the market** — you must justify the premium with data (dB reduction, weight, durability testing, full-auto rated, etc.) that currently doesn't appear anywhere on the site.

What Competitors Do Better

Capability	SilencerCo	Dead Air	SIG	Unorthodox
Sound test data	Yes	Yes	Yes	**No**
Product specs on site	Detailed	Detailed	Detailed	**None**
Blog/content marketing	Active	Active	Active	**None**
Dealer network	Nationwide	Nationwide	Nationwide	**1 dealer**
Review presence	Extensive	Extensive	Growing	**Zero**
Direct purchase on site	Yes	Via dealers	Via dealers	**Redirects to GearFire**
Social following	500K+	300K+	1M+	**Small**

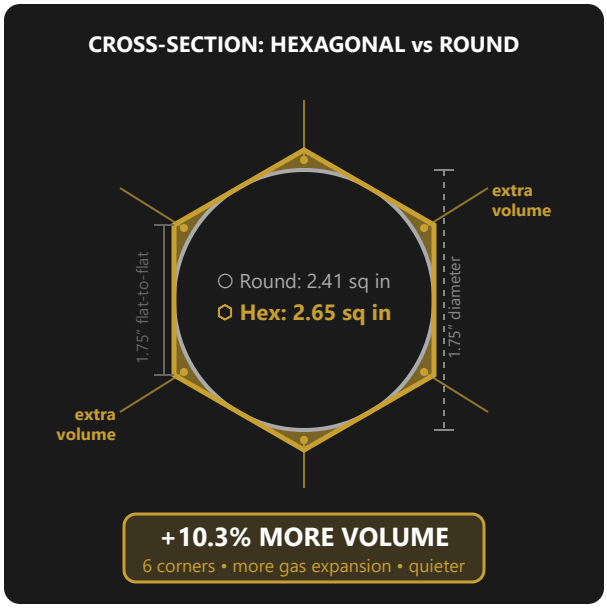
Your Differentiators (Lean Into These)

- **First hexagonal suppressor design** — own this claim loudly with patent info if applicable

- **100% American-made, start to finish** — invented, manufactured, and coated entirely in Pennsylvania. This is a massive differentiator in the firearms market where "Made in USA" carries real weight. Many competitors use overseas components or outsource coating. Lean into this *hard* on every product page, in social media bios, and in marketing copy
- **3D additive manufacturing in titanium** — cutting-edge, but you're not explaining it anywhere
- **Compelling heritage story** — the Irish immigrant / Great Flood / Eugene Griffin narrative is excellent content that's buried on the About page

Why Hexagonal? The Engineering Advantage (Use This on the Site)

The hexagonal design isn't just aesthetic — it's a measurable engineering advantage over round suppressors. At the same 1.75" envelope width, a hexagonal cross-section delivers **10.3% more** in every dimension that matters for suppression:



Metric (at 1.75" width, 6" length)	Round	Hexagonal	Gain
Cross-sectional area	2.41 sq in	**2.65 sq in**	**+10.3%**
Internal volume	14.43 cu in	**15.91 cu in**	**+10.3%**
Inner surface area	32.99 sq in	**36.37 sq in**	**+10.3%**

What this means for the shooter:

- **+10.3% more internal volume** — more gas expansion space means lower exit pressure, which directly translates to quieter shots. The gas has more room to slow down and cool before leaving the suppressor
- **+10.3% more inner surface area** — more wall contact means faster heat transfer from hot gases to the titanium body. Cooler gas = quieter report. More surface also improves long-term heat dissipation during sustained fire
- **Six flat faces** — wrench-free mounting and dismounting by hand. Round suppressors require tools or aggressive knurling. Flat faces also prevent rolling off a bench
- **Corner turbulence** — the six internal corners create micro-turbulence that disrupts laminar gas flow, further decelerating exhaust gases compared to a smooth round bore

> ***Recommendation:*** *Create a graphic similar to the diagram above for the website and product pages. This is the kind of visual that gets shared on social media and firearms forums. The "+10.3% more volume in the same footprint" claim is concrete, verifiable, and unique to Unorthodox Suppression. No other suppressor company can make it. Consider also creating a short video or animation showing the cross-section comparison.*

5. Pricing Strategy Analysis: $999 Base + $99 Muzzle Adapters

Currently SMOKEY and SPOOKY sell at **$1,199 with both muzzle adapters included**. The alternative: drop the base price to **$999** and charge **$99 per muzzle adapter**.

Revenue Impact

Scenario	Base Price	Adapters	Revenue (Both Adapters)	Revenue (1 Adapter)	Revenue (0 Adapters)
Current	$1,199	Included	$1,199	$1,199	$1,199
Proposed	$999	$99 each	$1,197	$1,098	$999
Difference	—	—	−$2	−$101	−$200

Arguments For the $999 Model

- **Psychological price barrier:** $999 breaks under the critical $1,000 threshold. With the NFA tax stamp now at $0 (as of January 2026), the sticker price *is* the price — making sub-$1K positioning even more powerful. Buyers comparing options in Google Shopping or on dealer sites will see "$999" vs competitors at $1,100+ and click yours first
- **Competitive positioning:** At $999 base, you're priced near SIG HEXIUM (~$900–1,100) and below Precision Armament TiTrex (~$1,100) rather than above both. This removes price as an objection for first-time buyers comparing 3D-printed titanium options
- **Adapter upsell funnel:** Most buyers will add at least one adapter, so real revenue per sale is likely $1,098–$1,197. The few who buy the can alone at $999 are customers you would have *lost entirely* at $1,199
- **Marketing advantage:** "Starting at $999" is dramatically better ad copy than "$1,199" — especially on social media and in Google Shopping results where price is the first filter
- **Accessory revenue stream:** Once you have an adapter SKU, you can sell replacements, additional thread pitches, and future mount options as standalone products — creating repeat purchase opportunities from existing customers

Arguments Against / Risks

- **Revenue dilution:** If a significant portion of buyers only purchase one or zero adapters, average revenue per unit drops $100–$200. At low volume, this matters
- **Perceived value erosion:** Some premium buyers may interpret a price drop as a quality signal — "why did they cut $200?"
- **Complexity:** More SKUs to manage, more customer questions ("which adapter do I need?"), and potential for shipping errors
- **NFA items are commitment purchases:** Buyers willing to wait for a Form 4 approval are less price-sensitive than typical consumers. With the $0 tax stamp removing the old $200 barrier, suppressor purchases are surging — but the price difference may still not be the real barrier for this audience

Recommendation

> ***Do it.*** *The sub-$1,000 positioning is worth more in marketing leverage than the potential $2/unit loss on full-adapter sales. The suppressor market is trending toward modular/configurable pricing (see: Dead Air's mount system, SilencerCo's ASR/direct thread options). Selling the can at $999 and adapters separately aligns with industry direction and gives you a headline price that competes.* ***However*** *— frame it as "$999 | Adapters sold separately" rather than "price drop from $1,199" to avoid devaluing existing inventory or early-adopter goodwill.*

---

6. Content Strategy Recommendations

You have **zero content** outside of product listings. This is a major missed opportunity in a market where buyers research extensively.

Blog Topics to Create (High Search Volume)

1. **"Made in Pennsylvania: How We Build the World's First Hexagonal Suppressor"** — manufacturing story content showing the full PA-based pipeline (design, 3D printing, coating). Huge for SEO + brand trust + social media sharing
2. **"How to Buy a Suppressor: NFA Process Explained"** — evergreen traffic driver
3. **"Hexagonal vs Round Suppressors: Why Shape Matters"** — own your niche
4. **"3D Printed Titanium Suppressors: The Future of Sound Suppression"** — technical authority
5. **"SPLIT vs [Competitor .22 Suppressor]"** — comparison shopping content
6. **"The Story Behind Unorthodox Suppression"** — expand the About page into real content
7. **"How to Buy a Suppressor in 2026: $0 Tax Stamp, eForm 4, and Wait Times"** — highly searched, especially with the new $0 stamp driving first-time buyers into the market

Video Content

Your YouTube links to @GriffinArms — create dedicated Unorthodox Suppression content:

- Sound comparison tests (metered dB readings)
- Torture tests / full-auto dumps
- Manufacturing process B-roll (3D printing is visually fascinating)
- Customer testimonials after Form 4 approvals

---

7. GearFire Checkout Experience

Currently, all purchases redirect from the Unorthodox Suppression site to the Griffin Arms GearFire storefront (`griffinarms.gearfire.com`). This is the **only payment path available**, which makes it critical to optimize. Several issues exist:

Current Problems

Issue	Impact
Ad-heavy pages — GearFire storefronts display distributor promotions, third-party product ads, and cross-sell banners that clutter the page	Distracts from your products; makes the page feel like a marketplace, not a premium brand store
UI mismatch — GearFire uses a light, generic retail template while your main site is dark, minimal, and premium	Jarring brand disconnect; customers may question whether they're in the right place or if the link is legitimate
Second age gate — GearFire shows its own 18+ verification modal after your site already verified 21+	Redundant friction in the purchase funnel
Griffin Arms branding only — the GearFire store shows "Griffin Arms LLC" with no mention of Unorthodox Suppression	Customers clicking "ORDER NOW" from your site land on what appears to be a completely different business
Generic product catalog — GearFire lists distributor inventory alongside your proprietary suppressors	Your unique products get buried among commodity firearms and accessories

What You Can Do Within GearFire (Now)

GearFire offers branding customization through the Dealer Portal ($149–$249/month depending on tier):

- **Update colors and branding** to match your dark/gold aesthetic as closely as the platform allows
- **Add your Unorthodox Suppression logo** to the GearFire storefront header
- **Create custom banners** that reinforce the brand transition ("You're now shopping the official Unorthodox Suppression store, powered by Griffin Arms")
- **Create a custom department/category** dedicated to Unorthodox Suppression products so buyers can filter directly to your cans
- **Use product tags** like "In Stock" or "New" to highlight your suppressors above distributor inventory
- **Link directly to product pages** rather than the GearFire homepage — avoid making buyers search for your product after they already clicked "ORDER NOW"

Bridging the Experience on Your Site

Since GearFire is the only payment option, minimize the friction on the Unorthodox Suppression side:

- Add a clear interstitial message before the redirect: *"You're being directed to our secure checkout partner, Griffin Arms, to complete your purchase"*
- Include the Griffin Arms / GearFire logo on your site near the order button so the transition isn't a surprise
- Consider embedding GearFire product pages in an iframe on your site (if GearFire supports it) to keep buyers visually within your brand

Long-Term: Alternative Platforms to Consider

If GearFire's limitations become a growth bottleneck, firearms-friendly ecommerce alternatives exist:

Platform	Monthly Cost	Best For	Brand Control
WooCommerce (self-hosted WordPress)	~$50–$125 (hosting + plugins)	Full control, lowest long-term cost	**Total** — you own everything
BigCommerce	$299+ /mo	Scalable with FFL integrations	High — full theme control
Shopify Plus	$2,300+ /mo	Best conversion optimization	High — but needs 3rd-party payment processor for firearms
AmmoReady	$179–$999 /mo	FFL-specific, distributor sync	Moderate
GearFire (current)	$149–$249 /mo	Quick FFL setup, compliance built-in	**Limited** — template-based

> ***Recommendation:*** *For a company selling 3 proprietary SKUs (not a full gun shop catalog), WooCommerce with a firearms-friendly payment processor (e.g., Durango Merchant Services, PayKickstart, or Square for in-person) would give you complete brand control at the lowest cost. Your Squarespace site could link to a WooCommerce checkout subdomain (* `shop.unorthodox-suppression.com` *) styled to match your main site perfectly. This is a medium-term project but would eliminate every GearFire friction point.*

---

8. Product Description Audit

Product descriptions exist on **griffinarms.net** (a third website discovered during this audit) and are referenced by the GearFire checkout links. These descriptions have significant issues that undermine buyer confidence.

Brand Fragmentation Update: Three Websites

There are now **three separate websites** for the same business:

Site	Platform	Purpose	Email Listed
unorthodox-suppression.com	Squarespace	Brand site / marketing	griffinarms@protonmail.com
griffinarms.net	Squarespace	Product pages / specs	griffinarms86@gmail.com
griffinarms.gearfire.com	GearFire	Checkout / payment	(GearFire default)

Two different email addresses across sites, two Squarespace subscriptions (both at risk under the firearms AUP), and a GearFire store. This must be consolidated into one platform.

Current Product Descriptions — Issues Found

Issue	Details	Fix
Incorrect/confusing caliber designations	SMOKEY lists caliber as ".223" but is described as "rated for magnum centerfire calibers" — unclear if .223 is the maximum rating or the intended use. SPOOKY lists ".36" as maximum caliber, which is technically correct but uncommon in suppressor marketing	Clarify that these are *maximum* rated calibers and list all compatible cartridges so buyers can instantly confirm their firearm is supported: **SMOKEY (max .223 / bore ≤ .224"):** .17 HMR, .17 WSM, .204 Ruger, .22 LR, .22 WMR, .22 Hornet, .222 Rem, .223 Rem / 5.56 NATO, .224 Valkyrie **SPOOKY (max .36 / bore ≤ .358"):** *.17–.22 cal:* all calibers listed above for SMOKEY *.24 cal:* .243 Win, 6mm ARC, 6mm Creedmoor *.25 cal:* .25-06 Rem, .250 Savage *.26 cal (6.5mm):* 6.5 Creedmoor, 6.5 Grendel, 6.5 PRC, .260 Rem, 6.5x55 Swedish *.27 cal:* .270 Win, 6.8 SPC, 6.8x51 / .277 Fury *.28 cal (7mm):* 7mm-08, 7mm Rem Mag, 7mm PRC, .280 Rem *.30 cal:* .300 BLK, .308 Win / 7.62 NATO, .30-06, .300 Win Mag, .300 PRC, .300 WSM, .30-30, 7.62x39 *.31 cal:* 7.62x54R *.33 cal:* .338 Lapua, .338 Win Mag, .338 Federal, .33 Nosler *.35 cal:* 9mm, .380 ACP, .38 Special, .357 Mag, .357 SIG, .350 Legend, .35 Rem, .35 Whelen, .358 Win Publishing this list on each product page eliminates the #1 buyer question: "Will this work on my gun?"
No dB reduction data	Zero sound suppression performance data on any product. This is the single most important specification for a suppressor buyer	Get products tested (even self-measured with a calibrated meter) and publish dB reduction at muzzle

Issue	Details	Fix
		and at ear for common host firearms
Price inconsistency	SMOKEY/SPOOKY listed at $1,200 on griffinarms.net but $1,199 on unorthodox-suppression.com	Standardize pricing across all platforms
Both show "Sold Out"	SMOKEY and SPOOKY are marked Sold Out on griffinarms.net with no waitlist, no ETA, and no way to express interest	Add an email signup for restock notifications. "Sold Out" with no next step is a dead end
SPLIT missing entirely	The newest product (SPLIT, $550 .22 suppressor) does not appear on griffinarms.net at all	Add SPLIT product page with full specs to every platform where products are listed
Outdated "Order & Hold" option	References "$0 tax stamp" and "hold until January 1, 2026" — the $0 stamp is now in effect and the date has passed	Remove the hold option or update to reflect current NFA process (eForm 4, $0 stamp now standard)
Thin feature descriptions	"Low back pressure design to keep fumes and gases regulated" — vague. Every suppressor claims low backpressure. No data, no comparison, no explanation of *why* the hexagonal design achieves this	Explain the engineering: how does hexagonal geometry affect gas flow vs. round baffles? Include a diagram or cross-section
Awkward processing language	"Allow 35-45 processing for shipping and Form 3 approval" — missing the word "days," and most buyers need a Form 4 (dealer-to-individual), not Form 3 (dealer-to-dealer)	Clarify: "Allow 35–45 days for manufacturing and shipping to your dealer. Your dealer will then submit an ATF eForm 4 for transfer to you."
No thread pitch explanation	Lists "1/2x28 and 5/8x24 direct taper (both included)" without explaining which firearms these fit	Add: "1/2x28 fits most .223/5.56 AR-15 barrels; 5/8x24 fits most .30 cal / .308 barrels"
No full-auto rating mentioned	At the $1,200 price point, competitors advertise full-auto ratings prominently	If rated for full-auto, state it clearly. If not, consider it a product development priority

Suggested Rewritten Description (SMOKEY Example)

> **SMOKEY — Hexagonal Titanium Suppressor**
>
> The first hexagonal suppressor ever made. Crafted from Grade 23 titanium using 3D additive manufacturing, SMOKEY's unique six-sided geometry delivers low backpressure, reduced blowback, and effortless mounting — no wrench needed.
>
> **100% American-made** — invented, manufactured, and coated entirely in Pennsylvania. Named for Clint Smith, founder of Thunder Ranch and a lifelong mentor to the Griffin Arms family.
>
> **Specs:** 6" L × 1.75" W • 10 oz • Grade 23 Ti body, 17-4 SS adapter • 1/2x28 and 5/8x24 direct-thread mounts available • No barrel length restrictions

> **Max rated caliber:** .223 / 5.56 NATO • **Compatible with:** .17 HMR, .17 WSM, .204 Ruger, .22 LR, .22 WMR, .22 Hornet, .222 Rem, .223 Rem / 5.56 NATO, .224 Valkyrie
>
> **$999** (muzzle adapters sold separately, $99 each)

---

9. Technical Recommendations

1. **Fix Google indexation immediately** — this is a showstopper
2. **Add Google Analytics 4** — can't optimize what you can't measure
3. **Add Facebook Pixel** — for retargeting visitors who didn't purchase
4. **Implement Product schema markup** — helps Google show prices and availability in search
5. **Get an SSL certificate audit** — ensure all pages serve over HTTPS consistently
6. **Page speed** — Squarespace is generally acceptable, but the Instagram embed grid may slow mobile load times. Consider replacing with static images that link to Instagram
7. **Fix the Instagram handle** — appears to be `@unorthodoxsupression` (missing a 'p')

---

10. Priority Action Plan

URGENT (Now)

- ☐ **Back up all site content, images, and design assets** (completed — see site-backup/)
- ☐ **Begin platform migration off Squarespace** — firearms are prohibited under their AUP; site could be shut down at any time

Immediate (This Week)

- ☐ Fix the "IT'S" → "ITS" typo on the homepage
- ☐ Remove or replace placeholder shop products
- ☐ Update SMOKEY/SPOOKY availability (Jan 2026 has passed)
- ☐ Submit site to Google Search Console and verify indexation isn't blocked
- ☐ Fix Instagram handle spelling
- ☐ Update GearFire ORDER NOW links to go directly to product pages, not the storefront homepage
- ☐ Clarify caliber listings: add "Max rated caliber" label and list common compatible cartridges
- ☐ Fix "Sold Out" status or add restock notification signup
- ☐ Fix processing language ("35-45 days" not "35-45 processing"; Form 4, not Form 3)
- ☐ Standardize pricing ($1,199 vs $1,200 discrepancy between sites)
- ☐ Remove outdated "Order & Hold until January 1, 2026" option
- ☐ Add SPLIT product page to griffinarms.net (currently missing)
- ☐ Consolidate email addresses (protonmail vs gmail across sites)

Short-Term (30 Days)

- ☐ Add product specification pages with dB data, weight, length, caliber, thread pitch
- ☐ Set up branded email (`@unorthodox-suppression.com`)
- ☐ Create a "How to Buy a Suppressor" FAQ page
- ☐ Add meta titles and descriptions to every page
- ☐ Add Product and LocalBusiness structured data
- ☐ Customize GearFire storefront branding (logo, colors, banners) via Dealer Portal
- ☐ Add transition messaging on your site before GearFire redirect

Medium-Term (90 Days)

Send products to 3–5 reviewers/YouTubers

- [ ] Launch a blog with 4–6 SEO-targeted articles
- [ ] Submit for PEW Science sound testing
- [ ] Explore Silencer Shop / Silencer Central distribution
- [ ] Create comparison content against SIG HEXIUM (direct competitor)

Long-Term (6 Months)

- [ ] Build out a dealer network page
- [ ] Develop a warranty/guarantee program and publish it
- [ ] Evaluate WooCommerce or BigCommerce as GearFire replacement for branded checkout
- [ ] Trademark the hexagonal suppressor design if not already done

---

Bottom Line

The brand identity and product concept are strong — a hexagonal 3D-printed titanium suppressor is genuinely novel. But **nobody can find you**. The site isn't indexed by Google, there are no reviews anywhere online, and the product pages lack the technical data that suppressor buyers demand before spending $1,200 on an NFA item with a months-long wait. Fix discoverability and trust signals first, then invest in content and distribution.
